LEVIATHAN

MORSE CODE CONVERTER

Leviathan is an interactive Morse code converter that utilizes voice recognition, text-to-speech, and Morse code encoding/decoding. Users can either encode their spoken input into Morse code or decode a given Morse code message back into plain text. The program uses the SpeechRecognition library to capture and convert voice input and supports Morse code abbreviations for efficiency. The pyttsx3 library is used for text-to-speech functionality, providing audible feedback of decoded messages. Additionally, the program can play Morse code sounds using the MorseCodePy library, making it a comprehensive tool for learning and utilizing Morse code through both auditory and visual means.

The screenshot shows a terminal window within a dark-themed IDE interface. The top navigation bar includes tabs for PROBLEMS, OUTPUT, DEBUG CONSOLE, TERMINAL (which is underlined, indicating it's active), and PORTS. The terminal content displays a Morse code converter application:
